

AMENDMENTS TO THE CLAIMS

As advised by Examiner in the Office Action, a listing of all claims is provided as follows:

1. (Previously Amended) An apparatus for hands free holding of an article to a hat, comprising:
 - a. a substantially stiff lower clamp for attaching to a hat comprising a bill and a crown that covers a head of a user, wherein the substantially stiff lower clamp comprises:
 - i. a shape contoured to match the juncture of the bill with the crown; and
 - ii. a first lower planar surface with serrated teeth designed to grip the underside of the bill and an upper planar surface to provide grip support integral with the first planar surface, also oriented approximately parallel to the first planar surface and adapted to removably attach to the bill;
 - b. a substantially stiff upper clamp integrally secured to the first planar surface, and wherein the substantially stiff upper clamp comprises a base engaging two arms, wherein an inner arm of the two engaging arms slides inside the crown on one side for resting alongside the head of the user and the other side resting against the inside of the crown, wherein the inner arm of the two engaging arms comprises a surface that has serrated teeth to hold the hat and an outer arm of the two engaging arms that is substantially parallel to the inner arm and is in a spaced apart relationship to the inner arm to removably attach to the crown;
 - c. a spring fixedly secured to a spring base on the outer arm and extending away from the base substantially parallel to the soft outer clamp, wherein the spring is adapted to removably secure an article; and
 - d. a soft outer clamp secured to the spring for additionally holding the article.
2. (Original) The apparatus of claim 1, wherein the lower clamp is a member of the group: metal, coated metal, rigid plastic, urethane and combinations thereof.

3. (Original) The apparatus of claim 1, wherein the upper clamp is a member selected from the group consisting of metal, coated metal, rigid plastic, rubber, foam, polyurethane and combinations thereof.
4. (Cancelled)
5. (Previously Amended) The apparatus of claim 1, wherein the lower and upper clamps are adapted to attach to each side of the hat and hold an external device symmetrically.
6. (Original) The apparatus of claim 1, wherein the upper clamp comprises a curvilinear shape.
7. (Cancelled)
8. (Cancelled)
9. (Original) The apparatus of claim 1, wherein the spring is a plastic spring or a steel spring.
10. (Cancelled)
11. (Original) The apparatus of claim 1, wherein the soft outer clamp further comprises a cover.
12. (Previously Amended) The apparatus of claim 11, wherein the cover is made from a soft, foam-like material adapted to engage an external device.
13. (Cancelled)
14. (Original) The apparatus of claim 1, wherein the soft outer clamp includes indicia selected from the group consisting of advertising, trademarks, identifying marks, ornamental structure, designs, patterns and artistic representations.
15. (Original) The apparatus of claim 1, wherein the base includes indicia selected from the group consisting of advertising, trademarks, identifying marks, ornamental structure, designs, patterns and artistic representations.

16. (Original) The apparatus of claim 1, wherein the soft outer clamp consists of a clear material and the spring includes indicia selected from the group consisting of advertising, trademarks, identifying marks, ornamental structure, designs, patterns and artistic representations.

Applicant believes no new matter has been added with these amendments.
